

Super ELUG Packing

The stuffing box is perhaps the most important piece to your artificial lift surface hookup from the standpoint, it is your **SEAL**. The most important component to the stuffing box sealing, is the packing inside the stuffing box. As important, is the secondary seal of your Standard ELUG or BSELUG. WSI continually tests new materials and designs to meet the demands for ever-changing well conditions. By working with rubber manufacturers and field-testing new designs, WSI wants to make certain that our packing stands up to stringent durability and performance standards.

BSELUG & ELUG

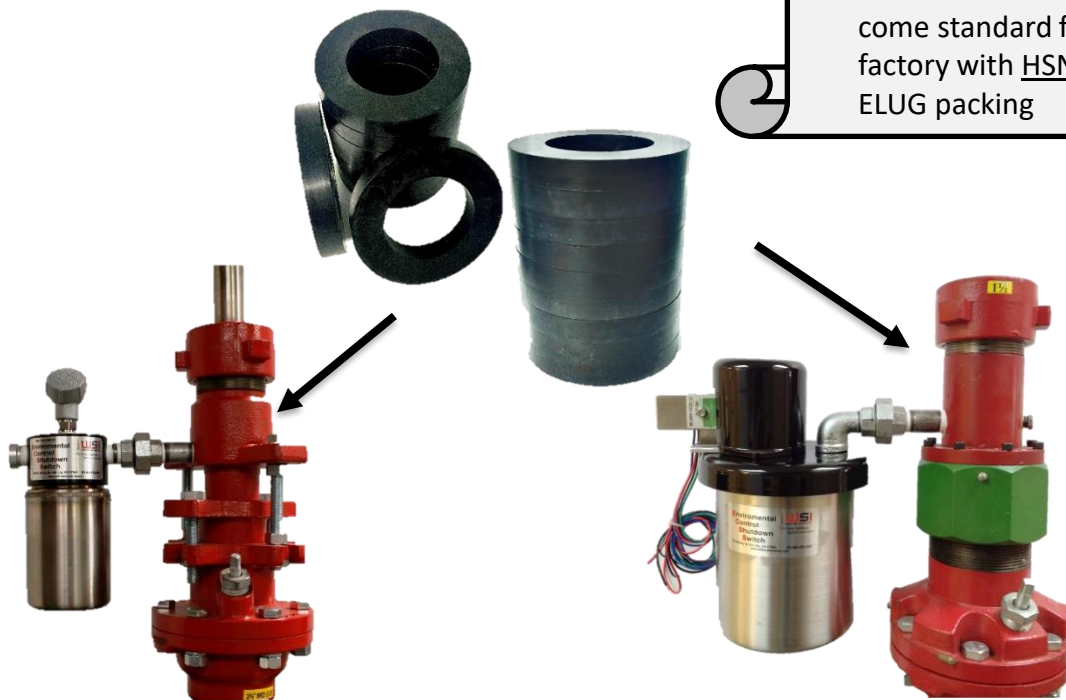

- Provides a secondary seal
- Fits any WSI stuffing box
- Uses Super ELUG or V Style packing
- Promotes clean, environmentally sound wellsite hookup

"NEW"

Super ELUG Packing

- More economical option
- Easier to replace
- Will fit in BS and Classic Style ELUGS
- All WSI rubber based
- Available sizes 1" – 1-3/4"

❑ Note: Classic & BS ELUG's come standard from factory with HSN Super ELUG packing
