

WSI Low Profile Lubricator (LPL™)

The WSI low profile lubricator (LPL) is a self contained, entirely automatic unit that rests on top of any stuffing box. It applies lubricant to the polished rod with felt pads that are fed by wicks from the oil pots. The wicks supply the polished rod with clean and sufficient oil, ensuring trouble-free operation without over-lubricating the rod. If pitting of the polished rod occurs, or is likely, corrosion inhibitors can be placed in the lubricator pots, controlling the pitting and reducing replacement costs.

WSI Low Profile Lubricator

- Low profile – 3 3/8" tall
- One-quart oil fills both pots
- Half the lubricant lasts twice as long
- Permanent covers on pots prevents water and dirt contamination
- Dust seal rubber wipes dust and sand from rod on downstroke
- Secured by chain tie downs
- **NEW enhanced wicking system**

"Customer Corner"

- Increase stuffing box packing life
- Decrease maintenance time and cost
- Helps with limited stroke length
- Easy installation and access to fill pots
- Replaceable felt pads
- Helps reduce scale buildup
