

“WSI” Back Pressure Regulator

The WSI back pressure regulator is an excellent and economical device for automatic relief and control of pressure in liquid service.

- Prevents gas breakout to control paraffin by keeping gas in solution
- Constant pressure on oil column, assuring full tubing string at all times
- Provides continuous lubrication to polished rod, helping to extend packing life
- Full tubing string helps to increase bottom hole pump efficiency
- Can be used as a by-pass to the casing when lead lines freeze or get plugged
- Meets MR0175 NACE specifications

Model 7720-T

Part #	7720-T BPR “T Style” Stainless Ball & Seat
7720-0010-200	2” BPR, 5 - 200#, T Style
7720-0010-500	2” BPR, 5 - 500#, T Style
7720-0010-900	2” BPR, 25 – 900#, T Style
7720-0010-150	2” BPR, 200 – 1500#, T Style
