

“WSI” Back Pressure Regulator

The WSI **In-Line** back pressure regulator is an excellent and economical device for automatic relief and control of pressure in liquid service.

NOTE: Easy In-Line repair model

- Replace in line. Never take out of service to repair.
- No spills or mess to change out repair kits.
- Prevents gas breakout to control paraffin by keeping gas in solution
- Constant pressure on oil column, assuring full tubing string at all times
- Provides continuous lubrication to polished rod, helping to extend packing life
- Full tubing string helps to increase bottom hole pump efficiency
- Can be used as a by-pass to the casing when lead lines freeze or get plugged
- Meets MR0175 NACE specifications
