

NEW “KB” Kevlar Brass Packing

The stuffing box is perhaps the most important piece to your artificial lift surface hookup from the standpoint; it is your **SEAL**. The most important component to the stuffing box sealing, is the packing inside the stuffing box. WSI continually tests new and better materials in our elastomer facility to meet the demands of ever-changing well conditions. By working with rubber manufacturers and field-testing new designs, WSI works to make certain that our packing stands up to stringent durability and performance standards.

KB™ Cone Packing

- **HIGHEST** rated cone Packing in the industry.
- Great in steam applications.
- Excellent in high water cut applications.
- Good in CO₂ & H₂S with excellent abrasion resistance.
- Temperatures to 500F.

Kevlar Brass installed at the factory

Important Note: The guidelines on this page are for general purposes only and should not be used as the sole determining factor for packing material selection. Each down hole condition is different and must be addressed on a case-by-case basis to determine the best material solution for your particular well condition.
